

1A Adjustable / Fixed Low Dropout Linear Regulator

General Description

The AMS1117 is a series of low dropout voltage regulators which can provide up to 1A of output current. The AMS1117 is available in six fixed voltage, 1.2, 1.8, 2.5, 3.3 and 5.0V. Additionally it is also available in adjustable version. On chip precision trimming adjusts the reference/ output voltage to within $\pm 2\%$. On-chip thermal limiting provides protection against any combination of overload and ambient temperatures that would create excessive junction temperatures.

The AMS1117 series is available in SOT-223, TO-252, SOT89 packages. A minimum of 10uF tantalum capacitor is required at the output to improve the transient response and stability.

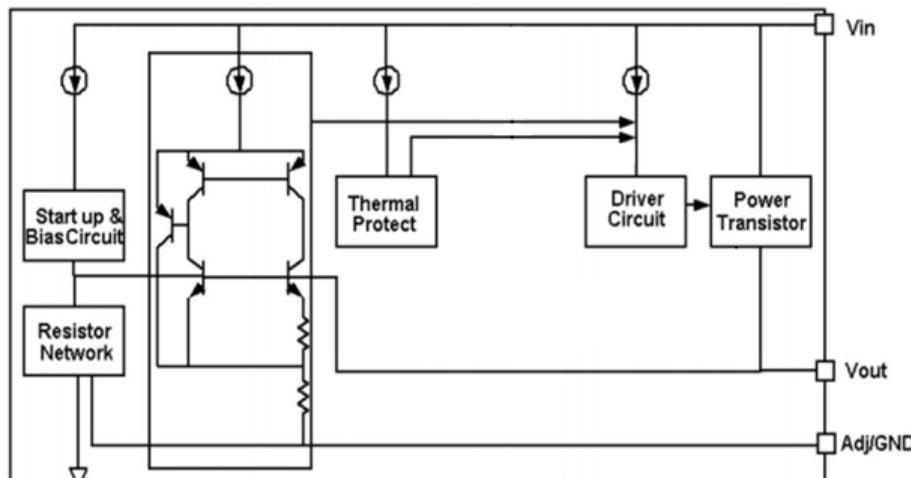

Features

- ◆ Low Dropout Voltage
- ◆ Load regulation:0.5% Max
- ◆ Optimized for Low Voltage
- ◆ On-chip thermal limiting.
- ◆ Maximum Input Voltage : 18V
- ◆ Adjustable Output Voltage or Fixed 1.2V, 1.8V, 2.5V, 3.3V, 5V
- ◆ Standard SOT-223, TO-252, SOT89 Packages

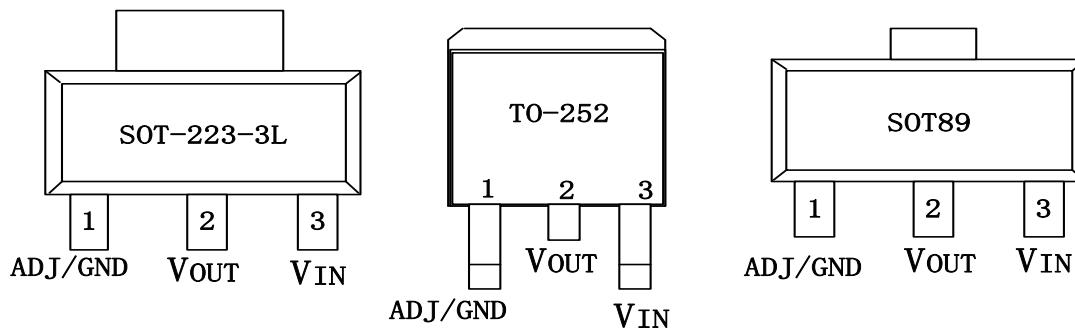

Applications

- ◆ Post Regulator for switching DC/DC Converter
- ◆ High Efficiency Linear Regulator
- ◆ Battery Chargers
- ◆ PC Add on Card
- ◆ Motherboard clock supplies
- ◆ LCD Monitor
- ◆ Set-top Box

Block Diagram

Pin Description

Absolute Maximum Ratings

Symbol	Description	Max	Units
V_{IN}	Input Voltage	18	V
I_{OUT}	DC Output Current	$PD/(V_{IN}-V_{OUT})$	mA
T_J	Operating Junction Temperature Range	-40 to 125	°C
θ_{JA}	Thermal Resistance (SOT-223)	135	°C/W
θ_{JA}	Thermal Resistance (TO-252)	100	°C/W
θ_{JA}	Thermal Resistance (SOT89)	200	°C/W
P_D	Maximum Power Dissipation (SOT-223)	750	mW
P_D	Maximum Power Dissipation (TO-252)	1000	mW
P_D	Maximum Power Dissipation (SOT89)	500	mW

Notes:

Instant maximum ratings specified will not cause permanent damage to the product, while long maximum ratings specified applied will do and may affect product reliability.

Recommended working conditions

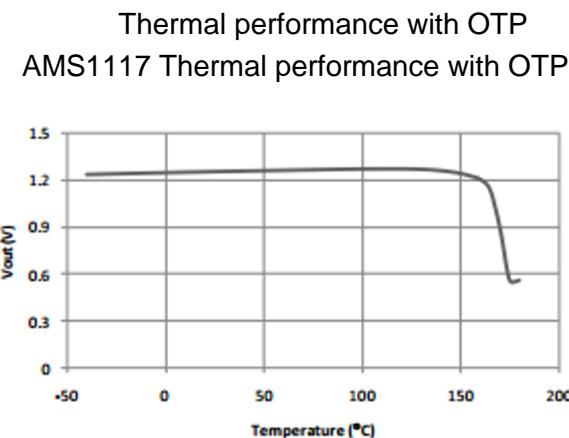

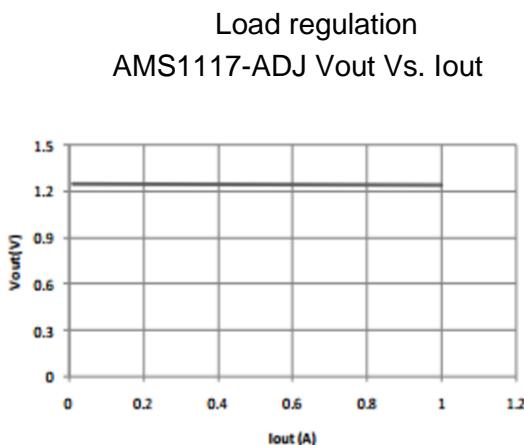

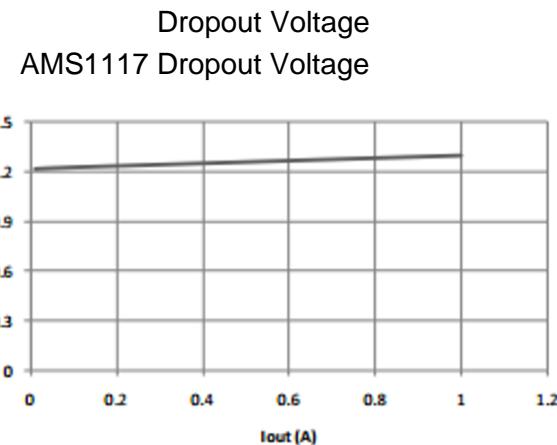

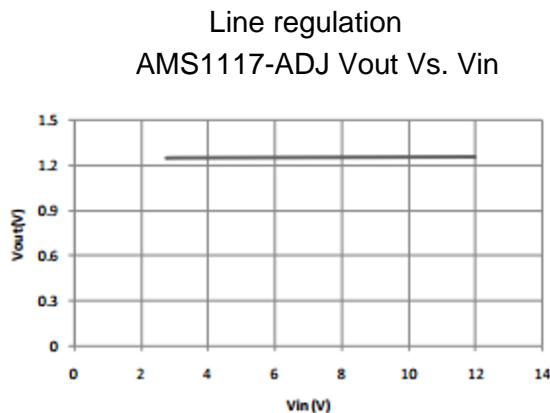

Symbol	Description	Max	Units
V_{IN}	Input Voltage	18	V
I_{OUT}	DC Output Current (SOT-223)	600	mA
	DC Output Current (TO-252)	900	mA
	DC Output Current (SOT89)	300	mA

Electrical Characteristics ($V_{IN} = <7V$, $T_j = 25^\circ C$ unless otherwise Specified. The ~ denotes specifications which apply over the specified operating temperature range.)

Parameter	Conditions	Min.	Typ.	Max.	Units
Reference voltage	$V_{IN}=V_{OUT}+2V$, $10mA \leq I_{OUT} \leq 1A$ AMS1117-ADJ	1.225(-2%)	1.250	1.275(+2%)	V
Output voltage	$10mA \leq I_{OUT} \leq 1A$, $V_{IN}=V_{OUT}+2V$ AMS1117-1.2	1.176	1.20	1.224	V
	AMS1117-1.8	1.764	1.80	1.836	
	AMS1117-2.5	2.450	2.50	2.550	
	AMS1117-3.3	3.234	3.30	3.366	
	AMS1117-5.0	4.90	5.0	5.10	
Line regulation1,2	$(V_{OUT} + 1.5V) \leq V_{IN} \leq 12V$, $I_{OUT} = 10mA$		0.15	0.30	%
Load regulation1,2	$(V_{IN}-V_{OUT}) = 2V$, $10mA \leq I_{OUT} \leq 1A$		0.20	0.50	%
Dropout voltage	$DV_{REF} = 1\%$, $I_{OUT} = 1A$		1.30	1.40	V
Current limit	$(V_{IN}-V_{OUT}) = 2V$	1.2			A
Adjust pin current	AMS1117-ADJ $1.5V \leq (V_{IN}-V_{OUT}) \leq 7V$, $10mA \leq I_{OUT} \leq 1A$		50	120	uA
Minimum load current	$1.5V \leq (V_{IN}-V_{OUT}) \leq 12V$		3	10	mA
Quiescent current	$V_{IN} = V_{OUT} + 1.25V$		3	10	mA
Ripple rejection	$f = 120Hz$, $C_{OUT} = 22\mu F$ Tantalum, $(V_{IN}-V_{OUT}) = 3V$, $I_{OUT} = 1A$	60	70		dB
Thermal regulation	$TA = 25^\circ C$, 30ms pulse		0.008	0.04	%/W
Temperature stability			0.5		%
Long-term stability	$TA = 125^\circ C$, 1000hrs.		0.3	1.0	%
RMS output noise (%of V_{OUT})	$TA = 25^\circ C$, $10Hz \leq f \leq 10kHz$		0.003		%
Thermal resistance, junction to case	SOT-223		15		$^\circ C /W$
	TO-252		10		$^\circ C /W$
	SOT89		20		$^\circ C /W$
Thermal shutdown	Junction temperature		150		$^\circ C$
Thermal shutdown hysteresis			10		$^\circ C$

- See thermal regulation specifications for changes in output voltage due to heating effects. Load and line regulation are measured at a constant junction temperature by low duty cycle pulse testing.
- Line and load regulation are guaranteed up to the maximum power dissipation (1.2W). Power dissipation is determined by input/output differential and the output current. Guaranteed maximum output power will not be available over the full input/ output voltage range.
- Output current must be limited to meet the absolute maximum ratings of the part.

Typical Performance Characteristics (TA=25°C, unless otherwise noted.)

Application Information

Output voltage adjustment

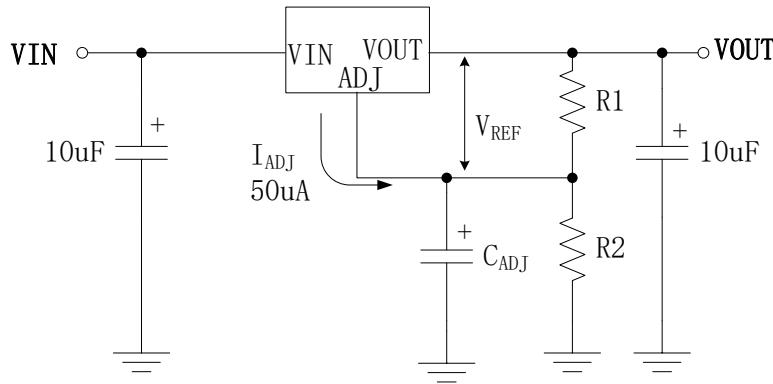

The AMS1117 regulates the output by comparing the output voltage to an internally generated reference voltage. On the adjustable version as shown in Fig.1, the VREF is available externally as 1.25V between VOUT and ADJ. The voltage ratio formed by R1 and R2 should be set to conduct 10mA (minimum output load).

The output voltage is given by the following equation:

$$V_{OUT} = V_{REF} (1 + R2/R1) + I_{ADJ} \times R2$$

On fixed versions of AMS1117, the voltage divider is provided internally.

Figure 1. Basic Adjustable Regulator

Input Bypass Capacitor

An input capacitor is recommended. A 10 μ F tantalum on the input is a suitable input bypassing for almost all applications.

Adjust Terminal Bypass Capacitor

The adjust terminal can be bypassed to ground with a bypass capacitor (CADJ) to improve ripple rejection. This bypass capacitor prevents ripple from being amplified as the output voltage is increased. At any ripple frequency, the impedance of the CADJ should be less than R1 to prevent the ripple from being amplified:

$$(2\pi * f_{RIPPLE} * C_{ADJ}) < R1$$

The R1 is the resistor between the output and the adjust pin. Its value is normally in the range of 100-200 Ω .

Output Capacitor

AMS1117 requires a capacitor from V_{OUT} to GND to provide compensation feedback to the internal gain stage. This is to ensure stability at the output terminal. Typically, a 10 μ F tantalum or 50 μ F aluminum electrolytic is sufficient.

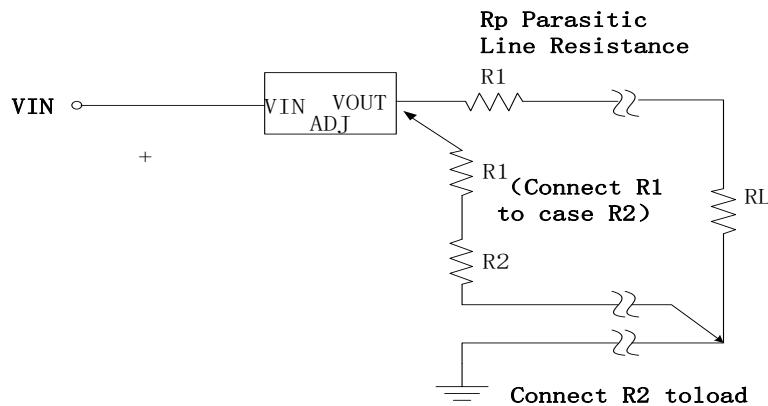

Note: It is important that the ESR for this capacitor does not exceed 0.5 Ω .

The output capacitor does not have a theoretical upper limit and increasing its value will increase stability. C_{OUT} = 100 μ F or more is typical for high current regulator design. example, with R1 = 124 Ω and f_{RIPPLE} = 120Hz, the C_{ADJ} should be > 11 μ F.

Load Regulation

When the adjustable regulator is used (Fig.2), the best load regulation is accomplished when the top of the resistor divider (R1) is connected directly to the output pin of the AMS1117. When so connected, RP is not multiplied by the divider ratio. For Fixed output version, the top of R1 is internally connected to the output and ground pins can be connected to low side of the load.

Figure 2. Best Load Regulation Using Adjustable Output Regulator

Thermal Protection

AMS1117 has thermal protection which limits junction temperature to 150°C. However, device functionality is only guaranteed to a maximum junction temperature of +125°C. The power dissipation and junction temperature for AMS1117 in DPAK package are given by

$$PD = (V_{IN} - V_{OUT}) * I_{out}$$

$$T_{JUNCTION} = T_{AMBIENT} + (P_D * \theta_{JA})$$

Note: TJUNCTION must not exceed 125°C

Thermal Consideration

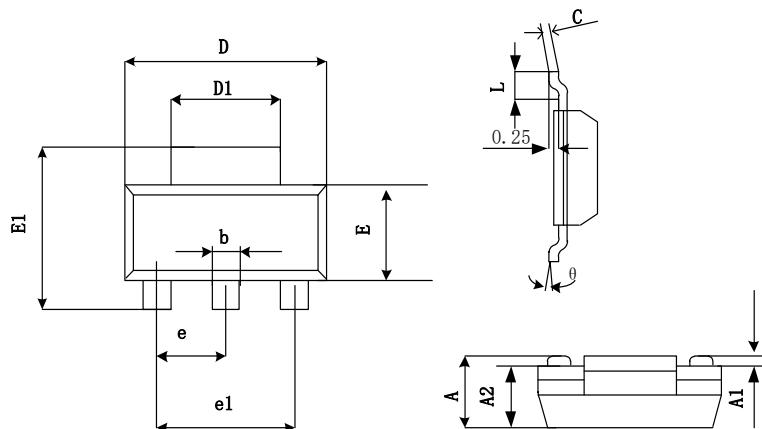

The AMS1117 series contain thermal limiting circuitry designed to protect itself from over-temperature conditions. Even for normal load conditions, maximum junction temperature ratings must not be exceeded. As mention in thermal protection section, we need to consider all sources of thermal resistance between junction and ambient. It includes junction-to case, case-to-heat-sink interface, and heat sink thermal resistance itself.

Junction-to-case thermal resistance is specified from the IC junction to the bottom of the case

directly below the die. Proper mounting is required to ensure the best possible thermal flow from this area of the package to the heat sink. The case of all devices in this series is electrically connected to the output. Therefore, if the case of the device must be electrically isolated, a thermally conductive spacer is recommended.
